Recombinant Kallikrein-11, Human

Catalog Number: BK0356-10µg Source: SF9 insect cells Quantity: 10µg

Description:

Kallikreins are a subgroup of serine proteases having physiological functions. Kallikrein-11 diverse (KLK-11) is possible multifunctional protease.KLK11 efficiently cleaves 'bz-Phe-Arg-4-methylcoumaryl-7-amide', a kallikrein substrate, and weakly cleaves other substrates for kallikrein and trypsin. Kallikreins are a subgroup of serine proteases having diverse physiological functions. Growing evidence suggests that many kallikreins are implicated in carcinogenesis and some have potential novel cancer and other disease omarkers.Recombinant Kalhuman likrein-11(rhKLK-11) secreted in Sf9 insect cells is a single glycosylated polypeptide chain containing 232 amino acids. A fully biologically active molecule, rhKallikrein-11 has a molecular mass of 35.0 kDa analvzed by reducing SDS-PAGE and is obtained by proprietary chromatographic techniques at GenScript.
