

# PLC γ1 (G777) polyclonal antibody

Catalog: BS1295

Host: Rabbit

Reactivity: Human, Mouse, Rat

## **BackGround:**

Phosphoinositide-specific phospholipase C (PLC) plays a crucial role in the initiation of receptor mediated signal transduction through the generation of the two second messengers, inositol 1,4,5-triphosphate and diacylglycerol from phosphatidylinositol 4,5-bisphosphate. There are many mammalian PLC isozymes, including PLC β1, PLC  $\beta$ 2, PLC  $\beta$ 3, PLC  $\beta$ 4, PLC  $\gamma$ 1, PLC  $\gamma$ 2, PLC  $\delta$ 1, PLC  $\delta$ 2 and PLC  $\epsilon$ . PLC  $\gamma 1$  is widely distributed in bronchiolar epithelium, type I and II pneumocytes and fibroblasts of the interstitial tissue. Actinregulatory protein Villin is tyrosine phosphorylated and associates with PLC  $\gamma 1$  in the brush border of intestinal epithelial cells. Villin regulates PLC y1 activity by modifying its own ability to bind phosphatidylinositol 4,5-biphosphate. PLC  $\gamma 1$  binds  $\alpha 1\beta 1$ Integrin and modulates a1B1 Integrin-specific adhesion. PLC y1 and Ca2+ play a direct role in VEGF-regulated endothelial growth, however this signaling pathway is not linked to FGF-mediated effects in primary endothelial cells.
