

Syk (phospho-Y323) polyclonal antibody

Catalog: BS4878

Host: Rabbit

Reactivity: Human, Mouse, Rat

Background:

Syk (spleen tyrosine kinase) is a 635 amino acid protein that contains one protein kinase domain and two SH2 domains. One of several members of the protein kinase superfamily, Syk functions as a positive effector of B cell antigen receptor (CD79)-stimulated responses, coupling CD79 with the movement of one calcium ion through one of two phospho-regulated pathways. Via its ability to influence CD79 activity and to control the movement of calcium through the cell, Syk plays an important role in a variety of cellular responses, including differentiation, phagocytosis, proliferation and B cell development. Syk expression is upregulated in T cell lymphoma, suggesting a possible role for Syk in tumorigenesis. Two isoforms of Syk, designated short and long, exist due to alternative splicing events.

Product:

Rabbit IgG, 1mg/ml in PBS with 0.02% sodium azide, 50% glycerol, pH7.2

Molecular Weight:

~ 72 kDa

Swiss-Prot:

P43405

Purification&Purity:

The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen and the purity is > 95% (by SDS-PAGE).

Applications:

WB: 1:500~1:1000

IHC: 1:50~1:200

Storage&Stability:

Store at 4 °C short term. Aliquot and store at -20 °C long term. Avoid freeze-thaw cycles.

Specificity:

p-Syk (Y323) polyclonal antibody detects endogenous levels of Syk protein only when phosphorylated at Tyr323.

DATA:

Western blot (WB) analysis of p-Syk (Y323) polyclonal antibody at 1:500 dilution

Lane1:Hela cell lysate treated with UV(24h)

Lane2:Raw264.7 cell lysate treated with UV(24h)

Lane3:H9C2 cell lysate treated with UV(24h)
