

CD172b Recombinant Protein

Catalog:	NCP0293	Host:	E.coli	Tag:	His-tag
----------	---------	-------	--------	------	---------

BackGround:

SIRPs (signal-regulatory proteins) are a family of transmembrane glycoproteins that were identified by their association with the Src homology 2 domaincontaining protein-tyrosine phosphatase SHP-2 in response to Insulin. The SIRP family negatively regulates the PI 3-K pathway, which may diminish EGFR-mediated motility and survival phenotypes that contribute to transformation of certain cell types. SIRP- $\alpha 1$ is a transmembrane protein which contains an extracellular portion with three immunoglobulin-like structures and a cytoplasmic region with four potential tyrosine phosphorylation sites. SIRP- α 1 is a substrate for activated receptor tyrosine kinases. In its tyrosine phosphorylated form, SIRP-a1 binds to SH-PTP2 through SH2 interactions and acts as an SH-PTP2 substrate. SIRP-al has been shown to have negative regulatory effects on cellular responses induced by growth factors, oncogenes and insulin. SIRP-\u00b31 shares extensive sequence homology with SIRP- α 1 in its extracellular portion but lacks the cytoplasmic portion. SIRP-y, originally designated SIRP-B2 (SIRP-B2, CD172g) has unique characteristics from both the α and β versions. SIRP- γ is expressed on the majority of T cells and a proportion of B cells. CD47 associates with SIRP-y, and this interaction signals unidirectionally only.

Product:

PBS, 4M Urea, PH7.4 Molecular Weight:

~43kDa

Swiss-Prot:

O00241

Purification&Purity:

Transferred into competent cells and the supernatant was purified by NI column affinity chromatography and the purity is > 85% (by SDS-PAGE).

Restriction Sites:

NdeI-XhoI

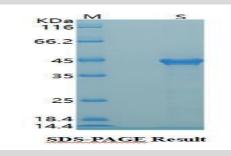

Storage&Stability:

Store at $4 \,^{\circ}{\rm C}$ short term. Aliquot and store at -20 $^{\circ}{\rm C}$ long term. Avoid freeze-thaw cycles.

Expression Vector:

pet-22b(+)

DATA:

Note:

For research use only, not for use in diagnostic procedure.
