

## Fetuin A Recombinant Rabbit mAb

Catalog: BS49498 Host: Rabbit	Reactivity: Human
BackGround: The protein encoded by this gene is a negatively-charged serum glycoprotein that is synthesized by hepatocytes. The encoded protein consists of two polypeptide chains, which are both cleaved from a proprotein encoded from a single mRNA. It is involved in several processes, includ- ing endocytosis, brain development, and the formation of bone tissue. Defects in this gene are a cause of suscepti- bility to leanness.
