

## p47-phox (phospho-S328) polyclonal antibody

Catalog: BS64056

Host: Rabbit

Reactivity: Human, Mouse, Rat

### BackGround:

The heredity chronic granulomatous disease (CGF) has been linked to mutations in p47-phox and p67-phox. The cytosolic proteins p47-phox and p67-phox, also designated neutrophil cytosol factor (NCF)1 and NCF2, respectively, are required for activation of the superoxide-producing NADPH oxidase in neutrophils and other phagocytic cells. During activation of the NADPH oxidase, p47-phox and p67-phox migrate to the plasma membrane where they associate with cytochrome b558 and the small G protein Rac to form the functional enzyme complex. Both p47-phox and p67-phox contain two Src homology 3 (SH3) domains. The C-terminal SH3 domain of p67-phox has been shown to interact with the proline-rich domain of p47-phox, suggesting that p47-phox may facilitate the transport of p67-phox to the membrane.

### Product:

Rabbit IgG, 1mg/ml in PBS with 0.02% sodium azide, 50% glycerol, pH7.2

### Molecular Weight:

~ 31 kDa

### Swiss-Prot:

P14598

### Purification&Purity:

The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen and the purity is > 95% (by SDS-PAGE).

### Applications:

WB: 1:500~1:1000

### Storage&Stability:

Store at 4 °C short term. Aliquot and store at -20 °C long term. Avoid freeze-thaw cycles.

### Specificity:

p-NCF1(S328) polyclonal antibody detects endogenous levels of NCF1 protein around the phosphorylation site of S328.

### DATA:

Western blot (WB) analysis of p-NCF1(S328) polyclonal antibody at

1:500 dilution Lane1:PC12 treated with uv 4h whole cell lysate

Lane2:Raw264.7 treated with uv 4h whole cell lysate

Lane3:A549 treated with uv 4h whole cell lysate

### Note:

For research use only, not for use in diagnostic procedure.
