

GNT-V/MGAT5 polyclonal antibody

Catalog: BS74555

Host: Rabbit

Reactivity: Human, Mouse

BackGround:

The protein encoded by this gene belongs to the glycosyl-transferase family. It catalyzes the addition of beta-1,6-N-acetylglucosamine to the alpha-linked mannose of biantennary N-linked oligosaccharides present on the newly synthesized glycoproteins. It is one of the most important enzymes involved in the regulation of the biosynthesis of glycoprotein oligosaccharides. Alterations of the oligosaccharides on cell surface glycoproteins cause significant changes in the adhesive or migratory behavior of a cell. Increase in the activity of this enzyme has been correlated with the progression of invasive malignancies.
