

KCNK9 polyclonal antibody

Catalog: BS74919

Host: Rabbit

Reactivity: Human, Mouse

BackGround:

This gene encodes a protein that contains multiple trans-membrane regions and two pore-forming P domains and functions as a pH-dependent potassium channel. Amplification and overexpression of this gene have been observed in several types of human carcinomas. This gene is imprinted in the brain, with preferential expression from the maternal allele. A mutation in this gene was associated with Birk-Barel mental retardation dysmorphism syndrome. Alternative splicing results in multiple transcript variants.
