

HIST1H3D polyclonal antibody

Catalog: BS78138

BackGround:

Host: Ral

Histones are basic nuclear proteins that are responsible

for the nucleosome structure of the chromosomal fiber in eukaryotes. Nucleosomes consist of approximately 146

bp of DNA wrapped around a histone octamer composed

of pairs of each of the four core histones (H2A, H2B, H3,

and H4). The chromatin fiber is further compacted

through the interaction of a linker histone, H1, with the

DNA between the nucleosomes to form higher order

chromatin structures. This gene is intronless and encodes

a replication-dependent histone that is a member of the

histone H3 family. Transcripts from this gene lack polyA

tails; instead, they contain a palindromic termination el-

ement. This gene is located separately from the other H3 genes that are in the histone gene cluster on chromosome

1mg/ml in PBS with 0.02% sodium azide, 50% glycerol,

Rabbit

Reactivity: Rat

munogen and the purity is > 95% (by SDS-PAGE).

Applications:

WB,1:500 - 1:2000

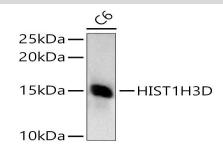

Storage&Stability:

Store at $4 \,^{\circ}$ short term. Aliquot and store at $-20 \,^{\circ}$ long term. Avoid freeze-thaw cycles.

Modification:

Unmodification

DATA:

Western blot analysis of extracts of C6 cells, using HIST1H3D antibody at 1:1920 dilution.
br/>Secondary antibody: HRP Goat Anti-Rabbit IgG at 1:10000 dilution.
br/>Lysates/proteins: 25ug per lane.
br/>Blocking buffer: 3% nonfat dry milk in TBST.
br/>Detection: ECL Basic Kit .
br/>Exposure time: 5s.

Note:

For research use only, not for use in diagnostic procedure.

Purification&Purity:

Molecular Weight:

6p22-p21.3.

Product:

pH7.2

16KDa

Swiss-Prot:

O16695/P68431

The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific im-
