

## NMT1 polyclonal antibody

Catalog: BS79148

Host: Rabbit

Reactivity: Human, Mouse, Rat

### BackGround:

Myristate, a rare 14-carbon saturated fatty acid, is co-translationally attached by an amide linkage to the N-terminal glycine residue of cellular and viral proteins with diverse functions. N-myristoyltransferase (NMT; EC 2.3.1.97) catalyzes the transfer of myristate from CoA to proteins. N-myristoylation appears to be irreversible and is required for full expression of the biologic activities of several N-myristoylated proteins, including the alpha subunit of the signal-transducing guanine nucleotide-binding protein (G protein) G $\alpha$  (GNAO1; MIM 139311).
