

Insulin Degrading Enzyme polyclonal antibody

Catalog: BZ16752

Host: Rabbit

Reactivity: Human, Mouse, Rat

BackGround:

This gene encodes a zinc metallopeptidase that degrades intracellular insulin, and thereby terminates insulins activity, as well as participating in intercellular peptide signalling by degrading diverse peptides such as glucagon, amylin, bradykinin, and kallidin. The preferential affinity of this enzyme for insulin results in insulin-mediated inhibition of the degradation of other peptides such as beta-amyloid.
