

CD226/DNAM-1 Recombinant Protein

Catalog: NCP0192

Host: E.coli

Tag: His-tag

BackGround:

DNAM-1/CD226 is a member of the immunoglobulin-like superfamily. It is expressed on T cells, natural killer (NK) cells, monocytes, and macrophages. It is a major activating receptor on NK cells. Engagement with its ligands Nectin-2 (CD112) and PVR (poliovirus receptor, also known as CD155) on the target cells leads to downstream activation of ERK, AKT, and PLC γ 2 signaling pathways that are crucial for NK activation and NK-mediated killing. LFA-1 physically associates with DNAM-1/CD226 and contributes to its signaling. Activating signal of DNAM-1/CD226 is counterbalanced by inhibitory receptors TIGIT and CD96, competing for the common ligands CD122 and PVR.
